

Traffic lights synchronization

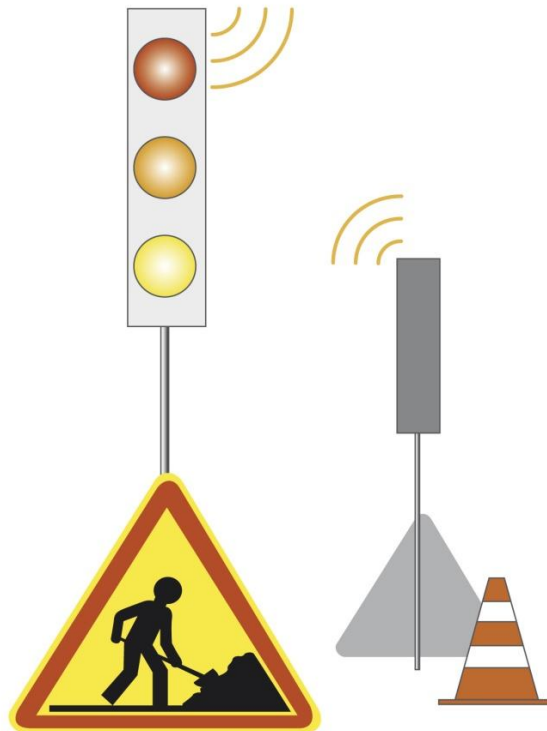

Objectives:

- Synchronize mobile traffic lights

Products:

- ARM-IOS

Application:

The ARM-IOS allowed to be directly implemented on automatons with RS23 RS485 outputs. In the case of traffic lights synchronization, the two modems communicate in order to coordinate the circulation (in one way or the other).

Configuration:

The two ARM-IOS must be configured in the manufactory or with AT commands, sent by a terminal in serial transparent mode.
