

Objectives:

- Transmit a weighing data

Products:

- LC20

**Application:**

The weighing industry need precision, that is why we realized for our customers specific products adapted to their expectations. For example, for a weighing hook, the weight is send to a PC via radio as soon as the load is hanged up.

Configuration:

The LC20 modules have to be directly implemented in the apparels. The configuration is fixed, made by a specific software. The connection is to the circuit is made with a terminal for a RS232, RS485, or TTL connection. The frequency range of the LC20 is 433MHz, with a powerful emission of 10mW. A SMA connector allowed an antenna connection.
